EDUCATION

Selcuk University Bachelor of Computer Engineering

Sep 2023 - Jun 2027

- Studied fundamental topics: algorithms, data structures, object-oriented programming, databases

Mehmet Tuza Pakpen Technical High School

Sep 2019 - Jun 2023

- Studied core topics: microcontroller programming, circuit design, PLC systems, and industrial sensors

PROJECTS

Microsoft Foundry Local — Industrial Automation Copilot

Tech: Python, FastAPI, RAG, LLMs, BM25, Vector Search, Cross-Encoder

- Developed a fully local industrial RAG assistant supporting technical PDF, DOCX, and XLSX documents with hybrid retrieval and citation-based responses.
- Implemented query rewriting, Reciprocal Rank Fusion, Cross-Encoder re-ranking, Self-RAG grading, and entity-aware retrieval for more reliable technical Q&A.

Dynamics-Randomized Manipulation with MuJoCo — Ongoing Research

Tech: Python, MuJoCo, Robotics, Simulation, Experimental Design

- Developing a research-oriented robotic manipulation framework to study how dynamics randomization affects robustness and task performance.
- Building reproducible, configuration-driven experiments with controlled physical parameter variations, benchmarking, and systematic evaluation.

Explainable Aerospace Battery RUL Prediction

Tech: Python, LSTM, Attention, Explainable AI

- Developed an explainable LSTM + attention-based RUL prediction model for aerospace Li-Ion batteries across multiple thermal conditions.
- Achieved ~84% RMSE reduction in critical cases and was selected for T3 Foundation Young Researcher Support.

TÜBİTAK 2209-A — Deep Learning-Based Oilseed Classification

Tech: Python, Deep Learning, Computer Vision, Image Processing

- Developed an image processing and deep learning pipeline for detection and six-class classification of oilseeds.
- Evaluated multiple deep learning-based approaches to improve classification performance on a 10K+ image dataset.

AI-Driven Inventory Optimization & Demand Forecasting

Tech: Python, Pandas, XGBoost, Time-Series Analysis

- Developed an end-to-end FMCG inventory optimization framework using XGBoost, time-series features, and dynamic safety-stock modeling.
- Reduced simulated inventory costs by 32.6% while maintaining a 95% service level under demand volatility.

ACHIEVEMENTS & COMPETITIONS

Unilever Factory Experience @HPC — 1st Place

- Ranked 1st in the Factory Experience program, applying data-driven problem solving to real-world manufacturing challenges.

EKA — Smart Vertical Transport & Robotic Construction Competition

- Top 10 finalist among 60 teams in the Emlak Konut competition.

Unilever Chain Reaction @ U-House

- Participated in a competitive supply chain simulation, applying data-driven optimization and decision-making strategies.

BTK Ankara AI Hackathon @ Ankara Teknopark

- Built a functional AI prototype within 30 hours under hackathon constraints.

TECHNICAL SKILLS

Data Eng. & Analytics: Power BI, SQL, ETL, Web Scraping, Pandas

AI & Machine Learning: LLM, RAG, Computer Vision, Deep Learning

Languages: Python, C++, C#, Java

Robotics & Automation: KUKA Sim Pro, KRL, PLC, ROS, IoT

DevOps & Tools: Git, Docker, Linux

WORK EXPERIENCE

Microsoft Türkiye - Summer AI Intern

June 2026 - Aug 2026

- Designed and developed a local AI solution for industrial automation using Microsoft Foundry Local and RAG architectures.
- Built a modular retrieval and generation pipeline combining hybrid search, re-ranking, and relevance evaluation.

FAB Tech. Inc - Product Management Intern

Sep 2025 - Nov 2025

- Completed an AI & Startup Strategy Fellowship, applying Founder and Project Mindset to develop ideas from 0 to 1.
- Built workflow automations with UiPath and used Google AI tools to create generative AI-driven business solutions.

OSR Robotics - Robotics Intern

June 2025 - July 2025

- Designed and implemented ML-driven fault detection algorithms for industrial robotic systems
- Programmed KUKA robots and analyzed motion through kinematics and dynamic modeling

Komalp - Industrial Automation Intern

June 2023 - July 2023

- Participated in the installation, maintenance, and troubleshooting processes of factory electrical systems.
- Conducted assembly, fault detection, and monitoring operations for power factor correction (PFC) panels.
- Actively contributed to the company's specialized compensation panel projects, ensuring energy efficiency and system stability.

Devpak Machine - Industrial Automation Intern

June 2022 - Oct 2022

- Assisted in PLC programming, control panel design, and machine wiring for industrial automation systems
- Contributed to the development of electrical systems for packaging and stretch wrapping machines
- Observed and analyzed existing automation systems to identify improvements in operational efficiency

CERTIFICATES

TEI Aviation Engines School

Unilever Supply Chain + Chain Reaction

Aspire Institute - Aspire Leaders Program

Deloitte Australia - Data Analytics

Fundamentals of Deep Learning

Academy Of Responsible Development Erasmus+

Intermediate Machine Learning
